

Найти ^{силу} натяжения нити T - ?

B-2 (3)

Gegeben:
 $m = 10 \text{ kg}$
 $a = 1 \text{ m/s}^2$
 $F_{TP} = ?$
 $x = ?$

Summe Masse $\sqrt{1}$

DX: $M a = m g - T \Rightarrow m a = m g - T$
 Summe Masse $\sqrt{2}$: $m a = T - F_{TP} \Rightarrow m a = T - F_{TP}$

$10 \cdot 1 = 10 \cdot 10 - T \Rightarrow T = 100 - 10 = 90 \text{ N}$
 $10 \cdot 1 = T - F_{TP} \Rightarrow F_{TP} = 90 - 10 = 80 \text{ N}$
 Problem: $a = 0,8$; $F_{TP} = 80 \text{ N}$
 $\mu = \frac{F_{TP}}{m g} = \frac{80}{100} = 0,8$

B-1 "3. Gelenk Hebräner"

Gelenk $\sqrt{1}$ (B-1)

Gegeben:
 $m = 4 \text{ kg}$
 $F = ?$
 $T = ?$

Summe Masse \Rightarrow DX: $M \cdot a = T_1$

Summe Masse \Rightarrow DX: $m a = F - T$
 $4 m a = F - T \Rightarrow 4 T = F - T \Rightarrow 5 T = F$
 $T = \frac{F}{5}$

Problem: $T = \frac{F}{5}$, (H)

Gelenk $\sqrt{2}$ (B-2)

Gegeben:
 $m = 2 \text{ kg}$
 $a = 2 \text{ m/s}^2$
 $m x = ?$
 $g = 10 \frac{\text{m}}{\text{s}^2}$

Summe Masse \Rightarrow DX: $m_x a = m_x g - T$
 Summe Masse \Rightarrow DX: $m a = T - m g$

$m_x a = m_x g - T \Rightarrow m_x \cdot 2 = m_x \cdot 10 - T$
 $m a = T - m g \Rightarrow 2 \cdot 2 = T - 20$
 $T = 4 + 20 = 24 \text{ N}$

$m_x \cdot 2 = m_x \cdot 10 - T$

$m_x \cdot 2 - m_x \cdot 10 = -T$

$-8 m_x = -T$; $m_x = \frac{T}{8} = \frac{24}{8} = 3 \text{ kg}$
 Problem: $m_x = 3 \text{ kg}$
